Required Tools:
- Keyhole Saw
- Saber or Reciprocating Saw
- Hammer
- Flat Bar
- Utility Knife
- Tape Measure
- Caulking Gun
- Screw Gun with Phillips Head
- Lumber Crayon
- Magnetic Compass
- Required Safety Equipment

*Components shown not included in all kits, see label on box.

*High Velocity Hurricane Zones: Shock Inner Dome must be installed with dome. To meet HVHZ requirements, use a six inch no pitch flashing or a pitched flashing with a four inch turret extension.
WARNING

Do not proceed with the installation until you have read the entire instructions, including these warnings. (Use of materials or methods not authorized by Solatube International will result in an invalid warranty.)

Solatube International, Inc. (seller) assumes no responsibility or obligation whatsoever for the failure of an architect, contractor, installer, or building owner to comply with all applicable laws, ordinances, building codes, electrical codes, energy codes, fire and safety codes and requirements, roof warranties and adequate safety precautions. Installation of this product should be attempted only by individuals skilled in the use of the tools and equipment necessary for installation. Protect yourself and all persons and property during installation. If you have any doubt concerning your competence or expertise, consult a qualified expert before proceeding.

Install at your own risk!

Solatube product installations may be dangerous and include the potential for death, personal injury and property damage. The hazardous conditions include but are not limited to the following:

- During installation, the Solatube Daylighting System’s reflective tubes may focus sunlight, causing intense heat or fire. Remove protective film only after the parts have been installed. Prior to and during installation, do not leave tubes in contact with combustible materials or unattended, especially near direct sunlight. Avoid skin burns.
- Solatube Daylighting System and Solar Star products may have sharp edges. Always wear leather or canvas gloves while handling and installing products.
- Solatube product installations require climbing and working at dangerous heights, including on ladders, scaffolding, roofs and in attic spaces. Risk of death, personal injury and property damage may result from a fall, or from falling objects. Use extreme caution to minimize risk of accidental injury, including, but not limited to the following procedures:
  - Clear area below your work space of all people, animals and other items.
  - Avoid working on surfaces that are slippery or wet.
  - Use foot-wear with excellent traction.
  - Use only strong, well supported ladders.
  - Work only in calm dry weather.
  - When in the attic, ensure that your weight is supported at all times with structurally sound framing; drywall material is not designed to carry a person’s weight.
- To reduce the risk of fire, electric shock, and personal injury, basic safety precautions should always be followed when using electric tools, including always wearing safety goggles or other suitable eye protection, and ensuring work area is clear of all electrical wires, gas pipes, water pipes, and other obstacles.
- When working in the attic or other dusty areas, use of a mask or respirator is recommended to avoid lung irritation. Attic spaces may be dark, confined, and subject to extreme temperatures. Beware of sharp protruding objects. Do not attempt installation without having someone within range of your voice or close enough to come to your aid if necessary.
- Solatube products are not designed to withstand the weight of a person, tools or other objects. Walking or placing objects on Solatube products.
- Additional support is recommended for long vertical and all horizontal tube runs. Review local building requirements and consult with appropriate building code official for proper material and placement of additional support. Avoid galvanic reaction (corrosion) if dissimilar metals are used.

Electrical Components

- Before installing, servicing, or cleaning unit, switch power off at service panel and lock service panel to prevent power from becoming switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device such as a tag to the service panel.

Re-Roofing

- Solatube products require special care if removed for re-roofing. In order to ensure proper removal and re-installation, please contact your Solatube International representative.

Please refer to the installation tips for the appropriate product below:

Daylighting Systems Installation Tips

These instructions are a step-by-step guide for the installation of a Solatube Daylighting System in the following conditions. For other roof types, please contact your Solatube International representative for additional information.

- Built Up Flat Roof - Single Ply/Membrane - Asphalt Shingle - Low/No Pitched - Pitched - Prefabricated Curbs - Metal Roof Panels
Daylighting Systems Installation Tips (Continued)

- Allow at least 2-3 hours for the installation, particularly if this is your first installation.
- During the day, turn off all the lights in the room to see how much natural light comes in through the windows, and determine the best position for the Solatube Daylighting System. To light a specific area, place the system over the area, not in the center of the room. This will prevent the desired area from being shaded by tall objects in the room.
- Measure the distance between the roof and the ceiling. If you don’t have enough tubing, contact your Solatube International representative for additional tubing.
- Avoid roof locations shaded by trees, ridges and chimneys, or near water channels or valleys. Also avoid roof areas with obstructions such as fire sprinklers, HVAC equipment, gas, water or drain pipes, air ducts or flues and make sure that the roof is adequate to endure an installation without damaging its waterproofing properties or weakening the building structure.
- All adhesives, seals and tapes are recommended to be applied to a clean and dry surface at a minimum of 70°F (21°C) for maximum performance.
- Foil tape contains a pressure sensitive adhesive and pressure must be applied at all seams for proper bonding. Foil tape is not intended for use as structural support of the extension tubes. For structural integrity use manufacturer supplied fasteners on all overlapping extension tube joints.
- Uninstalled product that is stored and exposed to excessive heat and or humidity can experience damage. Store product prior to installation in a cool dry place.

Daylight Dimmer Installation Tips

- Install Solatube Daylight Dimmer only on a properly aligned Solatube Daylighting System.
- Use only UL recognized components approved for this listing.

Light Add-On Kit Installation Tips

- This product is to be installed by qualified electricians only. Disconnect power before installation.
- “FOR USE IN NON-FIRE-RATED INSTALLATIONS ONLY.”
- Thermally protected “TYPE IC” (insulation may contact housing).
- “ACCESS ABOVE CEILING REQUIRED.”
- “SUITABLE FOR DAMP LOCATIONS.” Use only as a component of Solatube Daylighting System products.
- “MIN. 60°C SUPPLY CONDUCTORS.”
- Intended for installation with ½ in (12.7mm) minimum spacing from the fixture to cavity surfaces (side wall and overhead building member) and 1 in (25.4mm) minimum spacing to adjacent fixtures.
- Blinking light may indicate improper lamp wattage or type, or insulation is too close to fixture, or other condition causing overheating.

Caution

- Risk of fire and electrical shock. Most dwellings built before 1985 have supply wire rated 60° C.
- To reduce the risk of fire, use only:
  - Fluorescent Lamps, Medium Base - 23 Watt Maximum, Maximum Overall Length (MOL) 4 3/4 in (120 mm)
  - Compact Fluorescent (4 Pin Quad Tube) 26 Watt only
- Minimum thickness of metal tubing is 0.018 in (0.47mm)

Ventilation Add-On Kit Installation Tips

See Ventilation Add-On Kit installation instructions for tips.

Solar Star Attic Ventilation Installation Tips

- Keep Solar Star solar panels covered until product is mounted and sealed to roof. Cover solar panel whenever motor, fan, or unit is to be serviced. Fan blade is controlled by the solar panel and may become operational when panel is exposed to sunlight.
- Solar Star products are designed for general ventilation purposes only. Do not exhaust any hazardous materials or gases such as flammable, explosive or incendiary materials.
- Solar Star products have an unguarded fan blade. Do not use Solar Star products in areas that are easily accessible.

Caution

- Carbon monoxide may be drawn into a house or attic space with the operation of Solar Star products if fuel-burning equipment is not serviced or monitored regularly. Carbon monoxide (CO) is a colorless, odorless gas that can be hazardous to your health and may cause death. Fuel-burning equipment must have proper ventilation, Solar Star products are not designed to provide ventilation for fuel-burning products.

Solatube International, Inc. | 2210 Oak Ridge Way | Vista, CA 92081-8341 | www.solatube.com | T: 888.SOLATUBE

© 2013 Solatube International, Inc.
1. **Mark Ceiling and Roof Location Between Joists and Rafters Using Nails. Cut Ceiling Hole.**
   Minimum clearance of 5 3/8 in (140 mm) for 160 DS and 7 3/8 in (190 mm) for 290 DS between nail hole center and joist.

2. **Center on Nail and Trace Inside Flashing Base**

3. **Cut Roof Opening**

4. **Remove Roof Shingles**

5. **Set Flashing**
6 Fasten Flashing to Roof and Replace Shingles

7 Align Dome Ring and Flashing Holes

8 Align Top Tube Angle with Ceiling Opening

9 Remove and Tape Top Tube
   Tape all seams.

10 Fasten Top Tube to Flashing*
   *For HVHZ dip screw threads in sealant

11 Dome Installation
   Reflective side of LightTracker™ Reflector faces South in
   Northern Hemisphere (North in Southern Hemisphere). Align
   and snap dome into place engaging all four snaps.

© 2013 Solatube International, Inc.
12 Insert Bottom Tube
Align and measure tube run.

13 Assemble and Install Tube Run
Use notches to create a tapered tube.

*Tape seam for commercial install with suspended ceiling.
**14 Fasten to Ceiling**
Use drywall screws if fastening clamps do not engage ceiling. For cold weather climates, apply latex caulk to ceiling ring to minimize air transfer.

**15 Install Effect Lens and Diffuser**

**16 Now you can enjoy the benefits of your Solatube Daylighting System and the high performance, natural lighting it provides.**

Please refer to the following section for a list of alternative flashings and accessories.

### Steps

1. **Apply Sealant to Curb**
   - Apply sealant to the curb.

2. **Install Cap on Curb**
   - Install the cap on the curb.

3. **Fasten Flashing to Curb**
   - Fasten the flashing to the curb.

   *For HVHZ apply 4 more screws to curb cap.*

### Diagrams

1. **Center on Nail. Trace Inside and Outside Flashing Perimeter.**
   - Trace the inside and outside perimeters of the flashing.
   - Center the nail within these traced lines.

2. **Cut Roof Opening**
   - Trace the perimeter of the opening.
   - Cut along the traced lines, leaving a 1/2 in (13 mm) margin outside the traced area.
   - Ensure the cut line is clean and free of debris.

3. **Apply Sealant to Roof and Flashing**
   - Apply a 3/4 in (20 mm) thick layer of roof sealant over the roof and flashing.
   - Ensure the sealant is uniformly applied and free of air bubbles.

4. **Set Flashing**
   - Secure the flashing in place using the provided screws and adhesives.
   - Ensure proper alignment and tightness to prevent leaks.

**1 Install 0-90 Degree Extension Tube**

Install only between the top tube and an extension tube or two extension tubes.

[Diagram showing installation process]

- Minimum overlap at tube seams: 1 1/2 in (38 mm)
- Apply pressure to tape for proper bonding
- Additional structural support may be required for horizontal tube runs. Consult local building code.
Solatube Brighten Up® Series Accessories
Add more function by upgrading your Solatube Daylighting System with any of these great accessories.

Light Add-On Kit
When equipped with a light add-on kit, the Solatube Daylighting System provides the convenience of a switched light for night time use. Available in an energy efficient compact fluorescent design that meets California Title 24 requirements and in a universal fixture.

Daylight Dimmer
Because you don’t need 100% of the light 100% of the time, the innovative Solatube Daylight Dimmer easily controls the amount of daylight entering a room with the convenience of a switch. Our patented variable butterfly baffle controls the light output.

Ventilation Add-On Kit
The Solatube 160 DS is available with an optional Ventilation Add-On Kit. When combined with this innovative accessory, the 2-in-1 ceiling fixture minimizes ceiling penetrations for a more attractive look.

Flashing Insulator
This insulating material helps to reduce condensation in cold climates when the flashing is exposed to a humid interior space. The insulator is affixed to the flashing base and the top tube slips through the opening, which provides a seal between the interior and metal flashing.

Metal Roof Installation Kit
Order this kit for installation of a Solatube 160 DS or 290 DS flashing onto a standing seam metal roof.

Universal Tile Flashing (for applications without base flashing)
The Universal Tile Flashing integrates seamlessly with most tile profiles. The malleable flashing skirt, available with a pitched or no pitch turret, easily adapts to the shape of the tile.

Dome Upgrade Kit
Upgrade an older Solatube product to take advantage of Solatube’s patented Raybender™ 3000 Technology. The dome upgrade kit is installed without removing previous flashing or tubing.

Re-Roofing Recommendations
Solatube products require special care if removed for re-roofing. Refer to the Solatube Re-Roofing Recommendations to ensure proper removal and re-installation.
